NYAYO MARGA HI DHARMASYA
UNFILTERED, UNBIASED, UNINFLUENCED

OUR INSPIRATION

“Be the best or different from the rest, the choice is yours.”

Late Dr. Bijaya Kumar Sahoo

As the current chairperson of SAI International School, Dr. Silpi Sahoo embodies a visionary spirit that nurtures not only the minds of our students but also the values central to our democratic ethos. Her eminent persona has driven us to reflect the nuanced interplay of democracy in our society. She is an exemplary leader, teaching us core values in today's world such as leadership and the ability to be compassionate towards the less fortunate around us. Her positivity is a beacon of motivation for us all. Her unwavering support and guidance will push us to succeed in our future endeavors and strive for a better future.

Late Dr. Bijaya Kumar Sahoo, was the founding chairman of Sai International School. He serves as a great source of inspiration and motivation to us all. As a great visionary, he taught us to dream big, and to strive to achieve a future of our own making. Sir's motto; "Be the best, or different from the rest." is something that all Saioneers live by. With our newsletter, we hope to truly capture the essence of sir's ideology and the true spirit of non-partisan journalism.

Dr. Silpi Sahoo

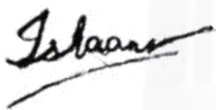

DISCLAIMER

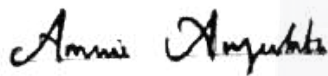

Unfiltered, Unbiased, Uninfluenced.

At Chakravayuh, we believe in the power of perspectives and the importance of truth. The views expressed in our magazine are not intended to target, discredit, or promote any individual or group. Rather, they represent a unique bird's eye view on current events, rooted in careful research and a commitment to factual reporting. While we strive to present information that is both accurate and thought-provoking, we respect the intelligence and autonomy of our readers. The interpretation(s) drawn from our content are ultimately up to you. As we believe, such should media be a space for informed dialogue, not directed thought.

To enhance readability, citations (bibliography) and selected word and term meanings or relevant information regarding the terms for each article are compiled towards the end of the magazine (glossary). Each article is labeled by number, and corresponding citations and meanings are listed under that article's heading in the final pages. If any of the articles are not glossarized, then their reading level is fairly easy, and it should be pretty simple to be read. For queries/complaints, mail at the address on the cover page.

FOREWORD

When words are free, will the youth dare to dream.

We present to you "Chakravyuh," a collection of political analyses and perspectives brought to you by a group of students. The very title, "Chakravyuh," evokes the image of a complex and inescapable strategic formation, a fitting metaphor for the intricate world of politics. It's a world that often seems distant and abstract to many young people, yet its influence permeates every facet of our lives, from the price of the food we eat to the quality of the air we breathe, from the opportunities we have to the very freedoms we cherish. It's easy to dismiss politics as something "for the grown-ups," a realm of dry debates and distant decisions. But the truth is, the decisions made within the political arena shape the future we inherit. Whether we actively participate or remain passive observers, politics impacts us all.

Understanding its mechanisms, its nuances, and its inherent power dynamics is no longer a luxury, but a necessity. This collection represents an effort by young minds to grapple with the complexities of the political landscape. The contributors to "Chakravyuh" have dared to look beyond the surface, to question, to analyze, and to offer their own perspectives on the issues that confront our society. They recognize that political engagement is not just about casting a vote every few years; it's about understanding the forces that shape our world and actively participating in the conversation about our collective future. In these pages, you will find diverse viewpoints and analyses on a range of political topics. "Chakravyuh" is not just a publication; it's an invitation – an invitation to explore the labyrinth of power, to understand its intricacies, and to recognize our own potential to shape its course. We believe that even within the complex formations of the "Chakravyuh," understanding and engagement can empower us all to find our way and make a difference.

Warmest Regards
The Panel, *Chakravyuh*

India is transitioning from a major defense importer to an emerging defense manufacturer and exporter, driven by the principle of "Atmanirbharta" (self-reliance). The defense budget has steadily increased, reaching ₹6.81 lakh crore for 2025-26, with a focus on indigenous production and innovation.

Defense production in 2024-25 hit a record ₹1.50 lakh crore, more than tripling the 2014-15 level, showcasing growth in fighter jets, missile systems, and naval vessels. Defence exports have surged 34-fold in the past decade, reaching ₹23,622 crore in 2024-25, with exports now reaching over 100 nations.

Blood in Paradise - The Pahalgam Tragedy, with Diplomacy in Flames

Pahalgam, Kashmir - On April 22, 2025, four armed men in camouflage emerged from forest shadows into the Baisaran meadow. 26 bodies fell that day and several others were injured. Most of the victims were innocent tourists, including an Indian navy officer on his honeymoon and a Nepali national. In a scene of indescribable horror and despair, only men were targeted and shot to death in front of their wives and kids.

An attack of this scale hadn't been seen in Kashmir since the bombing in October 2001, where 35 people were killed. The resistance front (TRF), a group thought to be a branch of Lashkar-e-taiba, claimed the attack. The NIA has officially begun working on this case. Investigators are questioning eyewitnesses, and are camping near that area to determine how the terrorists entered and fled.

Within hours of Pahalgam's terror attack, diplomacy became the 27th casualty. India struck first, and suspended the Indus Waters Treaty, with a promise that "not a drop" will flow across the border. India also closed the Attari-Wagah Crossing and ordered Pakistani nationals to leave, around 272 have left India. Indian forces have demolished six militant homes, and have searched over 100 residences of suspected supporters.

Pakistan has retaliated by, also announcing the closure of the Wagah border, closing its airspace for all Indian airlines, and suspending all trade with India. Pakistan is also threatening to suspend the 1972 Shimla agreement, and has stated that any attempt to stop or divert the flow of their water (according to the IWT) will be seen as an act of war. It also wants the involvement of Russia and China, and

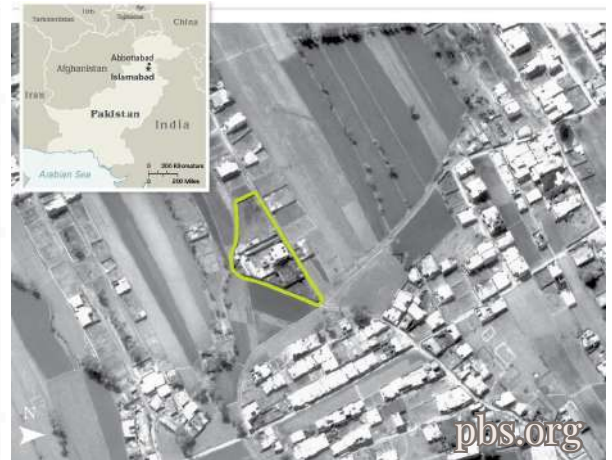

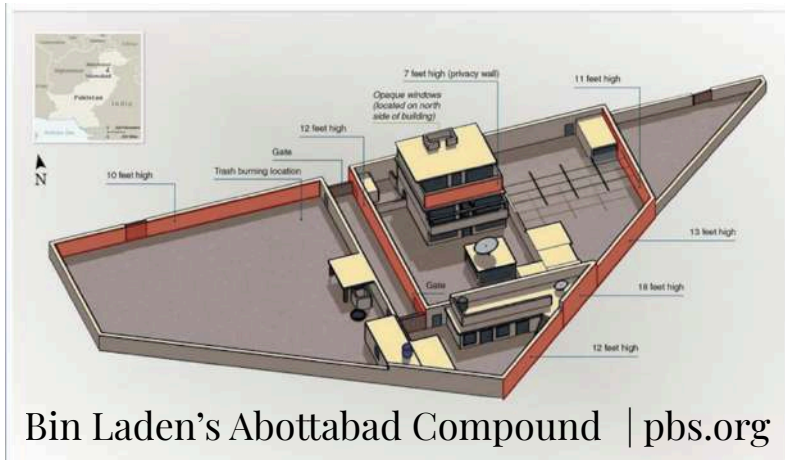

“
Within hours of Pahalgam's terror attack, diplomacy became the 27th casualty.
”

The discovery of Osama Bin Laden in 2011, right next to Pakistan's Military Academy in Abbottabad, sparked many questions. Many intelligence reports suggest that it is improbable that he was able to maintain such a close presence without alerting any of the security officials. However, the debate over whether the institution was truly aware or not remains unsolved. In July, then Prime Minister Imran Khan admitted to U.S. officials that around 30,000-40,000 armed militants are operating in Pakistan, and also acknowledged the fact that previously this fact was kept hidden during the war of terror.

The dreaded terrorist Maulana Masood Azhar's case; IC814 was hijacked in 1999 for his release; once he was released, he conducted a public meeting attended by thousands in Pakistan where he publicly declared that he would attack India again and true to his word, he planned an attack on the Indian parliament in 2001. He continues to reside in Pakistan, which showcases the fact that he still has operational freedom.

the setting up of a neutral investigation. Modi vows to serve the perpetrators and conspirators of this attack with the harshest response during his "Mann Ki Baat" address. Pakistan PM Shehbaz Sharif states that Pakistan will safeguard every inch of homeland, while adding, "Peace is our preference, but must not be construed as weakness".

Several investigations have raised serious allegations regarding the ties between Pakistan's security establishments and non-state actors, and the complexity of these ties is anything but straightforward.

Pakistan claimed the insurgents during the Kargil War were not Pakistani soldiers and that they were Mujahideen or freedom fighters from POK. And now, Army chief General Asim Munir publicly acknowledged involvement in the 1999 Kargil war. The Financial Action Task Force's decision to place Pakistan on its "grey list" makes it clear that many serious evidence-based concerns exist.

Twenty-six bodies can be counted. The displaced? Uncountable. One of the affected, Heelma's story reads like countless others-25 years in Odisha after marriage, she received the Indian government's "Leave India" notice. Once she gets to Karachi, she will have no home to go to. Since the partition of British India, Muslim women who marry men of another country are always the most affected. "You are caught in a place that is no longer your home-or it's a home that you don't recognize. And exile becomes your state of life."- Vijayan. At another checkpoint, Saira is forcibly separated from her 9 month old son. Her mother-in-law states "Two big countries and powers are fighting, and our innocent children are trapped." She said, "Only a mother knows the pain of leaving behind a nine-month-old". Pahalgam, once known as Kashmir's crown jewel, known for its pony rides through lush forests, river rafting, trekking trails, turned into a ghost town overnight.

Kashmir's economic backbone, its tourism has been gravely affected. 3.5 million tourists had visited Kashmir in 2024, this year the figures had been expected to rise much higher. But due to the untimely mass exit of the tourists after the attacks, many local people find themselves without economic stability or livelihoods, as most of them depended on the tourism industry. Its importance goes beyond just the economy, it's a vital base camp for the Amarnath Yatra of one of the most sacred pilgrimages in Hinduism.

The Pahalgam tragedy witnessed 26 lost lives, countless families displaced, and two nuclear powers in conflict. This calls for more than just mourning, it calls for action.

Terror networks are only able to flourish because they take advantage of our divisions, and rely on our failure to not cooperate with each other effectively. Breaking this cycle requires more than military posturing, it requires international cooperation and action. Institutional frameworks like the UN Counter-Terrorism [UNCT] mechanism need strengthening. Security co-operation should not be selective. The fallen in Pahalgam deserve more than revenge, and vengeance. They deserve a system that guarantees their deaths weren't just a prelude to more violence. 🕒

~ Ivana Singh

What Became of Humanity?

A lament for the forgotten faces in a world divided by belief, not bound by brotherhood.

Vasudhaiva Kutumbhakam.

The world is a family, is it?

A fraternity.

The gunman does not know

The man he shot

Is his own brother.

He does not know

The woman who sits and wails

Is his sister.

He is a blinded, twisted oppressor.

There is blood on the hay.

What will become of the corpse's son? Of his daughter?

His own flesh, his love?

What will become of the lady

She desperately clings on

Hoping it will all end.

This is no reverie.

You have your motives and your actions

But why must the innocent blood be spilled?

Why must we suffer for your twisted actions?

Why must the common man die?

Why is he always the scapegoat?

He just earns. To feed his child, to survive, to foster his kin.

Did his hardwork look like a taunt?

The civilians you shot are twice the human,
you will ever be.

You may have a cause, a religion, an identity

But

What became of humanity? 🕒

~ Alokita Mishra

On 2nd of May, US Secretary of Defence Mr Pete Hegseth telephoned Raksha Mantra Shri Rajnath Singh and extended his condolences to the heinous attack committed upon the Pahalgam tourists.

“Pakistan has been exposed as a rogue state, fuelling global terrorism & destabilising the region. The global community must explicitly and unequivocally condemn & calls out such heinous acts,” said the Raksha Mantri.

A response which would clear away the fear within the hearts of Indian tourist and the citizens near, a responses which would strike fear in the heart of the enemy, a response which would make us feel proud of the Indian armed forces struck the Pakistani air, at 0144 IST, hitting the terrorist infrastructure in Pakistan and POK where terrorist attacks against India have been planned and directed. Altogether, 9 sites were targeted. These actions carried out under Operation Sindoor were focused to be non- escalatory in nature. No Pakistani military base nor any residential areas were targeted during the operation. India showcased absolutist consideration towards the matter that ‘this disgusting act of terror in Pahalgam was not the fault of innocent citizen.’ Restraints were put in the selection of the target and method of execution.

“Operation Sindoor reminds me of when Lord Hanuman had ignited the flames of vengeance in the sinful city of Ravan’s Lanka, this answer was accordingly as direct and as powerful of a message to the world as was Hanuman’s act for the heinous deed conducted by the Lankan Asuras.” India said it all ‘if the meter of sins increases, then a liberator has to rise and take measures which would subdue the small sparks of greed, arrogance, and terror.’

Such acts of terrorism not only raise the already escalating tensions present within the global scale but also destroy the very core a civilised moral society. Operation Sindoor proves that India not here to only watch but also show, that it is more than capable of bringing justice to those who suffered and pain to those who caused these merciless actions. Pahalgam terror and Operation Sindoor - ‘The ice of terror, which was melted away by the flames of justice’. 🕉

LAW

LAW

LAW

LAW

The Indian Judiciary

The judicial system of India serves as a cornerstone of Indian democracy and the rights afforded to its citizens. Yet only 30-40% of people file cases in Indian courts and obtain justice. This is attributable to numerous judicial delays. Although solutions to these delays exist, their implementation requires effective coordination among administrative departments, which is lacking in India due to rigid hierarchy and overlapping responsibilities. Although there are numerous provisions for individuals within the justice system, owing to a myriad of challenges, realizing its full potential in the near future is unlikely. The most vulnerable and neglected groups in this system are women, marginalized communities, economically disadvantaged individuals, and many others. In contrast, several wealthy, influential, and well-connected individuals often find themselves in a diametrically opposite situation.

Along with the delays, inequality also exists within the courts. However, it is not solely the court's fault. Overpopulation, along with numerous other factors, renders it challenging to manage the situation as a whole. It becomes extremely difficult to handle such a large number of people, making adequate supervision of the public impossible and creating opportunities for individuals to engage in wrongdoing. This has also contributed to the substantial increase in crime rates in India over the past few years, to the extent that criminal cases have become entangled in a denial of justice. The denial of justice has serious and far-reaching consequences.

75 YEARS
OF THE
SUPREME COURT
OF INDIA

It can weaken the collective strength of a nation, cause people to lose faith in the judicial system, lead to mental depression among the populace, promote crime among fugitives, and disrupt the internal affairs of a country. Justice is a right, and as citizens, we can ensure that justice is delivered to people by spreading awareness and actively participating in political actions. 🗳️

~ Ipsita Nanda

THE INDIAN JUDICIARY FROM THE EDITOR'S DESK

The Indian judicial system is the largest and most elaborate in the world, on a **three-tier hierarchy**, with the Supreme Court sitting atop, followed by High Courts at the state, and District and Subordinate Courts at the local level. It is an **independent institution**, insulated from the legislature and the executive.

The Supreme Court, which was founded in **1950**, is the custodian of the Constitution and has judicial review power to invalidate any law or act that is against constitutional provisions or basic rights.

The one unique aspect of the Indian legal system is the **doctrine of Public Interest Litigation (PIL)**, which has been developed in the **1980s** that enables individuals or parties to approach courts on behalf of individuals whose rights whose rights are being infringed even if they themselves are not so.

Land, Law, Waqf **Flaws**

The Waqf (Amendment) Bill, 2025, aims to improve governance by enhancing transparency in property management, streamlining coordination between Waqf Boards and local authorities, and ensuring that stakeholder rights are protected. It seeks to update the Waqf Act, 1995, to address challenges in the management and oversight of Waqf properties. The primary objective is to enhance efficiency, improve accountability, and strengthen the administration of these properties dedicated to religious or charitable purposes. The Bill states that only a person practising Islam for at least five years may declare a waqf and clarifies that the person must legally own the property being declared. It removes the provision of waqf by the user and adds that Waqf-Alal-Aulad must not result in denying inheritance rights to the donor's heirs, including women.

Concerns have emerged from sections of the Muslim community regarding the potential implications of the proposed reforms. Some fear that the changes could lead to increased state involvement under the guise of transparency, which they believe may affect religious autonomy. This apprehension stems from a broader historical context where state intervention in minority institutions has sometimes led to tensions. Consequently, doubts have been raised about whether such measures, while framed as administrative improvements, might inadvertently impact the constitutional safeguards under Articles 26 and 30, which protect the rights of religious groups and minority-run institutions. The experience of Aligarh Muslim University (AMU) is often cited in this discussion. Although AMU was established with a focus on advancing education among Muslims, its minority status has been contested in courts on multiple occasions. Similarly, governance of Waqf Boards and property surveys has, in the past, been undertaken with limited consultation, leading to a perception of

exclusion and an erosion of trust among some community members. At the same time, comparisons are often drawn with the governance of Hindu religious institutions, particularly temples in states like Tamil Nadu, Karnataka, and Andhra Pradesh. These temples are administered under legislation such as the HR & CE Act, which provides for state management. While this system has also faced criticism and calls for reform, it has not typically been framed in terms of communal or constitutional concerns. This contrast in perception has contributed to a belief among some that religious institutions from minority communities face more intense scrutiny or regulation.

Religious property reforms have increasingly become entangled in political discourse. Initiatives that are perceived to impact specific communities may be viewed as contributing to polarization, while others, such as campaigns to “free temples” from state control, are often associated with cultural revivalism. These differing interpretations can make reform efforts politically sensitive, potentially impacting social cohesion and public confidence. To maintain the secular and constitutional framework of the country, religious property reforms should be approached with impartiality, clarity, and fairness. It is essential that such reforms are developed through inclusive processes involving religious leaders, legal experts, community stakeholders, and civil society. Ultimately, meaningful and sustainable change requires that all communities feel represented and engaged in the process, fostering mutual trust and long-term accountability. 🕒

~ Yuktaa Rajgarhia

Mechanical Justice

“Abetment of Suicide”, especially in familial cases, was brought into the limelight by the Supreme Court. The Court stated that this must be sensitized in order to provide apt justice, and except for persons involved genuine cases where the threshold is met shouldn't be spared, the provision “[S.306 IPC] should not be deployed against individuals only to assuage the immediate feelings of the distraught family of the deceased.” It stresses on the fact that provisions, such as (formerly) S.306 IPC aren't there to assuage your feelings, it's there because it's the law. If people took justice on the basis of sympathy, and into their own hands, the very pillars of law would fall apart. There's a reason, why even today, if people have disputes, they say “meet me in court.”

A bench comprising Justices Abhay S. Oka and K. V. Viswanathan came to the conclusion that it is time for investigators and related authorities to be austere in regards to the rule of law and make sure that mechanical justice is delivered, in regards to this law laid down by Section 306 of the Indian Penal Code(s) so people aren't subjected to the completely unfair abuse of a totally irrefutable prosecution. Abetment is defined as the aiding, conspiring, or instigating of a person towards another person in the doing of that thing, and it is high time that the fine lines between morality and fair justice must be defined.

The law, by its nature, is not intended to legitimize our sorrow or reflect our anger, it is intended to transcend them. When public opinion demands vengeance based on sentiment, the law demands equilibrium based on reason. It reminds us that justice is not synonymous with a sense of instinct, nor is it the theatrics of feeling. If it could be done, then all private sorrows would turn into public feud, and all grief would spawn a scapegoat. Law would then have to remain unemotional, not insensitive to suffering, but adversarial to being manipulated by it. It must possess a thought discipline which perceives loss, but will not be told what to do by loss itself.

Justice and morality are a gossamer thread apart, a thin line. Morality can twist to the culture, the era, to individual conscience. But justice, at its worst, can be no less than unflinching; it can have no whim of change. Something that can be immoral to one group of parents, or indeed to the majority, need not be illegal. To blur the two is to put society on the dangerous track where individuals' codes of ethics stand in danger of substituting for constitutional protections. The real strength of a democracy is the possibility of keeping private despair separated from public law so that what is punished is not the offense of not living up to one's ethical code, but the offense of flaunting the law. ©

TRAD E

MAY & SEPTEMBER | 2025 | 18

Nirmala Sitharaman

Nirmala Sitharaman is the Finance Minister of India, but she is far more than that. She is proof of how wit, discipline, and resolve guide the path of governance. Born in Madurai in 1959, having studied economics in Seethalakshmi Ramaswami College and, later, at JNU, she proceeded from London to research to the corridors of power in New Delhi.

The facts themselves are incredible: first-ever full-time woman Defence Minister of India, first-ever woman to present a Union Budget, and guide to an economy that rode out the storm of a pandemic, global slowdown, and inflationary waves. She has transformed the budget presentation ditching the colonial briefcase for the retro “bahi-khata” and remade the landscape of taxation with faceless assessments, corporate tax reductions, and GST simplification.

Nuclear Crossroads

Nuclear Disarmament: India's Stance In Context

UNGA - UNODA

Tuclear disarmament has long been a contentious issue in global politics, oscillating between dreams of a world free from nuclear weapons and the realities of geopolitical tensions. India, a key player in this discourse, has historically championed nuclear disarmament while maintaining its nuclear arsenal for strategic security. This dual stance underscores India's nuanced position in navigating the ideals of a nuclear-free world and the pragmatism of national defence. India has been a vocal advocate for global nuclear disarmament since the mid-20th century. In 1954, then-Prime Minister Jawaharlal Nehru called for a global ban on nuclear testing, marking India's early commitment to the cause. As a founding member of the Non-Aligned Movement (NAM), India consistently championed disarmament and decried the arms race among major powers. This commitment was further solidified in 1988 when Prime Minister Rajiv Gandhi presented the Rajiv Gandhi Action Plan at the United Nations General Assembly.

This ambitious proposal called for a time-bound, phased elimination of nuclear weapons globally. Despite its historical advocacy, India's decision to conduct nuclear tests in 1974 and 1998 shifted its stance from a non-nuclear to a nuclear-armed state. This development was driven by regional security concerns, particularly its strategic rivalry with nuclear-armed neighbours China and Pakistan. However, India's nuclear policy remains rooted in restraint and responsibility.

It follows a declared No First Use (NFU) doctrine, pledging not to use nuclear weapons unless attacked first. Moreover, India has committed to not using nuclear weapons against non-nuclear states, aligning with its principle of minimal deterrence. India has not signed the Treaty on the Non-Proliferation of Nuclear Weapons (NPT), labelling it as discriminatory for legitimizing nuclear arsenals of select states while denying others the same rights. Furthermore, India supports the Comprehensive Nuclear-Test-Ban Treaty (CTBT) but has not ratified it due to concerns about inadequate progress on total disarmament.

Despite these reservations, India actively engages in global disarmament discussions through platforms like the Conference on Disarmament (CD) and the United Nations General Assembly (UNGA). India's commitment to nuclear responsibility is evident in its support for peaceful uses of nuclear energy under the International Atomic Energy Agency (IAEA) framework. Its nuclear program emphasises civilian applications in energy, agriculture, and healthcare. Regionally, India's nuclear stance is shaped by its strategic environment, particularly tensions with China and Pakistan. While not part of any Nuclear-Weapon-Free Zone (NWFZ), India supports the principle in regions free from nuclear conflict. The road to complete nuclear disarmament is fraught with challenges, many of which resonate with India's concerns. Trust deficits among nuclear-armed states, regional rivalries, and the threat of nuclear materials falling into the hands of non-state actors hinder progress. Additionally, doctrines like deterrence continue to justify the maintenance of nuclear arsenals.

India's active participation in the United Nations Office for Disarmament Affairs (UNODA) and other bodies reflects its commitment to dialogue and transparency. Moving forward, India could play a pivotal role in fostering regional disarmament dialogues in South Asia. By balancing its defence needs with its historical advocacy for disarmament, India can lead by example, promoting equitable and inclusive global frameworks.

India's stance on nuclear disarmament reflects a careful balance between idealism and pragmatism. While it envisions a world free from nuclear weapons, it recognizes the realities of regional and global security dynamics. For true progress, the international community must address India's concerns over inequitable frameworks and work collaboratively toward trust-building and transparency. With its rich history of disarmament advocacy and responsible nuclear policies, India stands poised to contribute significantly to a safer, nuclear-free world. ©

Trade Wars

In the 21st-century financial sector, the revolutionary concept of globalization has taken centre stage. Yet in the past few years, trade has been used as a financial weapon to paralyse global markets and send political shockwaves. In recent times, the “America First” policy of President Trump has reignited an age-old trade battle for dominance. China, with its BRI or Belt Road Initiative, is continuously trying to boast its raw economic power, which was only further strengthened by the American fiasco in Afghanistan. The US, in the defence of its Indo-Pacific and wider global interests, has continuously strived to enhance its ties with an organisation like The Quad. China, in a two-pronged assault, is not only increasing its trade through the BRI but has also been one of the biggest forerunners of the De-Dollarisation Campaign. In this rapidly changing world, globalization again seems to be a distant dream beyond the horizon. Yet, with the return of Trump, a new wave of conflict is embroiling the major nations of the world.

The Rise of the libertarian forces in the West has resulted in tariffs that are sending tremors across the hearts of the capitalist world. This new global Outlook of the US towards the world and its allies has given this complex political landscape a new perspective, with nations like Canada and Mexico suffering significant losses. The interesting factor is the increasing role that social media plays in the modern world, not only shaping ideologies but the information that a common Gen Z or Gen Alpha person feeds on as can be evident from the Chinese government's use of 'TikTokers to prove their moral point of view.

But, gone are the days when Chinese communism would crush the dreams and livelihoods of many and MNCs would run banana republics. In this new trade war with nations like Vietnam and Canada, who're standing up to their superpower neighbours, it seems the days of a bipolar world are long gone. It is time the development and progress of people become the priority in the financial world and not the vested interests of superpowers. ©

Gone are the days when Chinese communism would crush the dreams and livelihoods of many and MNCs would run banana republics. In this new trade war with nations like Vietnam and Canada, who're standing up to their superpower neighbours, it seems the days of a bipolar world are long gone.

~ Ruhan Samantaray

THE INDIAN TAX REVAMP

Taxation is a longstanding topic of discussion in India, as it continues to provoke debates and conversations around fairness, complexity and the country's economy. Finance Minister Nirmala Sitharaman's announcement of an optional new tax regime in 2020 was met with significant pushback. Many think it was confusing, didn't make enough of a tax incentive to save and didn't offer enough relief for the middle class. Yet, bold reforms in the 2025–26 Union Budget changed the entire narrative. Increasing the tax exemption limit, streamlining the structure and giving more money in hand to people has changed the common narrative, with experts and taxpayers alike praising Sitharaman.

The government introduced the new tax regime to simplify taxation by providing reduced rates but eliminating most prevalent exemptions. But this left taxpayers wondering if it actually helped them. Many preferred the old scheme, which permitted deductions for investments such as Provident Fund (PF) and insurance(s). The GST regime was also not without criticism. Overall, there was a perception that the government's response had fallen short of easing the financial burden on middle-income earners. We've received an overwhelmingly positive response to these changes. That has led many critics of Sitharaman's tax policies to admit the government is making some effort to ease the burden on finances. Economists have built up the new system as simple and effective, and business leaders believe it is a step toward better compliance and stability.

These reforms have also enhanced the government's economic and political standing beyond individual taxpayers. Because it meets the needs of the middle class, the ruling party has made these voters its base. Increased disposable income is likely to increase economic growth by benefiting major sectors such as housing, automobiles, and retail.

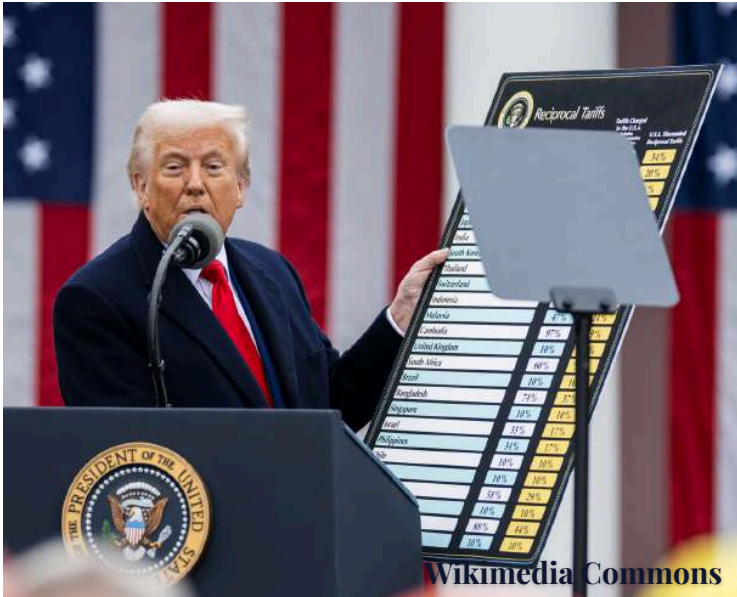

Finally, a simpler tax code increases compliance and helps sustain tax collection at levels that can be collected without aggressive enforcement. The tax policies that Sitharaman has shaped over the years have swung from being panned to being praised. The latest budget addressed these concerns directly with several major changes: tax exemption limit increased from ₹7 lakh to ₹12 lakh, providing relief to millions of taxpayers; revised tax slabs, ensuring a more progressive and balanced structure; standard deduction raised to ₹75,000 (from ₹50,000), allowing salaried individuals to save. In conclusion, these changes are expected to bring a significant reduction in tax liability for individuals, providing them with more disposable income and boosting economic growth. 🌟

~ Pranjal Mohanty

The Tariff Trap

Global Economic Recession

Executive authority has also started firing people from independent institutions in America, carefully replacing them with people who will align with the wider economic policy of the USA. The brutal reality is that the United States is treading on a new path, and with its inherent cultural, economic and social leverage on the world, it is bound to have severe repercussions. The next major factor is demographic change. The truth of the matter is that demographics are rapidly changing in the post-COVID world. Refugees are being accepted, but without proper management, resettlement, or schemes, the results of refugee inclusion in nations are severe. With seemingly clashing cultures and competing job avenues, the reality of a happy united front seems nothing but utopian.

Ever since globalisation has engulfed the world, each one of our lives is interconnected in a vast web of economic ties. To some, this new era is a boon, to others a bane, but the fact of the matter is that one spark anywhere can ignite a fire all around the world. We stand at the precipice of global recession and financial ruin. UNCTAD expects global growth to slow down to 2.3% this year, as trade and economic policy uncertainties erode business and investor confidence. A multitude of factors are contributing towards this new economic turmoil. "We are entering a new era," Pierre-Olivier Gourinchas, chief economist at the IMF, said. "This global economic system that has operated for the last eighty years is being reset." America has been the pre-eminent global economic hub since the end of the Second World War. As the herald of capitalism throughout the Cold War, it has espoused and championed the cause of free and open markets.

Yet times are changing, and tables are turning. A strong de-dollarisation campaign, Belt Road Initiative (BRI), and the unequal deals on which global nations interact with America have resulted in global disruption of supply chains due to tariffs. The United States of America is trying to move away from globalisation to a more isolationist point of view. The American government's tariffs are creating a sense of volatility and uncertainty in the minds of investors who do not want to take a risk.

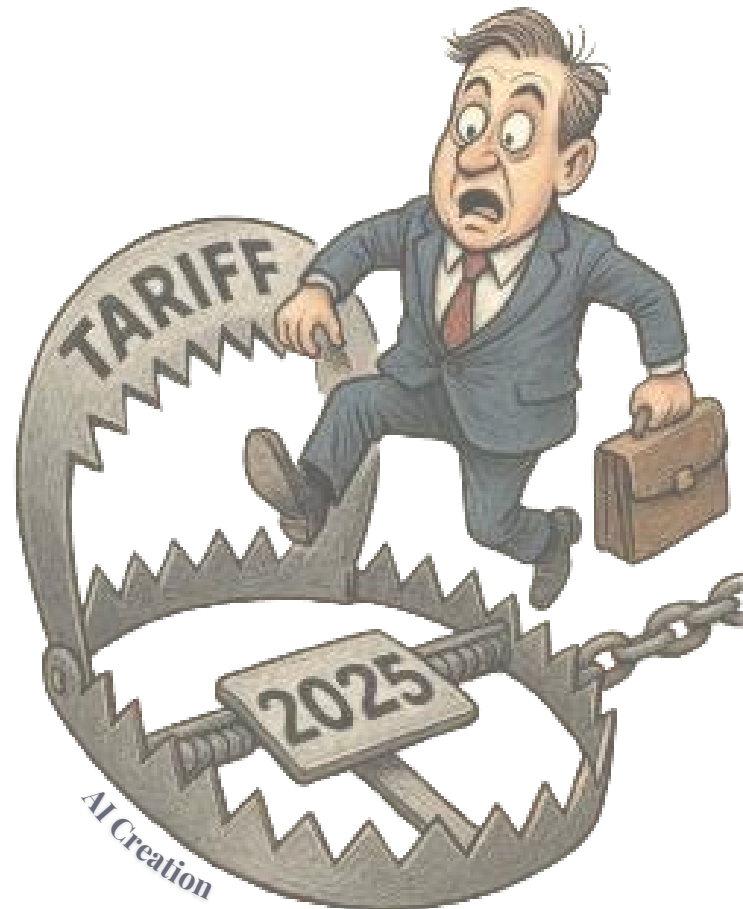

The rising unemployment, inflation, poverty and sheer helplessness are not only putting a strain on the economy but also disrupting societal peace. Not surprisingly, the world is at war. Again. We humans have been waging wars for resources and economic gains since the beginning of time. If you believe that World War I and World War 2 are the first multi-continental wars with grand alliances sending economic shockwaves throughout the globe and consequences that have shaped our lives, you would be wrong.

The Austrian War of Succession and the Seven Years' War would be but a few other examples. Yet the world during those times was not as connected as it is today. One of the biggest reasons for a major recession looming on the world's horizon is the various conflicts breaking out throughout the world, altering trade routes and shaking investors' confidence. Within the span of a few years, there have been 11 coups in Africa alone, impacting thousands of lives, livelihoods and investments, along with accelerating inflation, poverty and unemployment. On one hand, civil wars, like that in Sudan are destroying the economic machinery of entire nations and destabilizing the region.

On the other hand, escalating tensions like Russia-Ukraine and Israel-Palestine are bursting open with new wounds, along with old wounds scarring the world's financial system. Then there is the Middle Eastern area ticking like a time bomb, to blow the world's energy resources and trade routes into pieces. Whether it is the Israel-Hamas war, the Houthi Rebellion, or the recently concluded Syrian Civil War, each of them is putting a severe strain on the world's economy. At this point in time, all of us are connected through one invisible string: supply and demand. This chain has the power to connect a small shopkeeper sitting in Delhi's Chor Bazaar to a fashion designer working for Louis Vuitton. Human civilization today is built on togetherness, inclusivity and liberty, not on individuality and greed. "United we stand, divided we fall." The above-mentioned quote by Winston Churchill acted as a guiding light in one of humanity's darkest battles and should forever be etched in our hearts for progress and development.

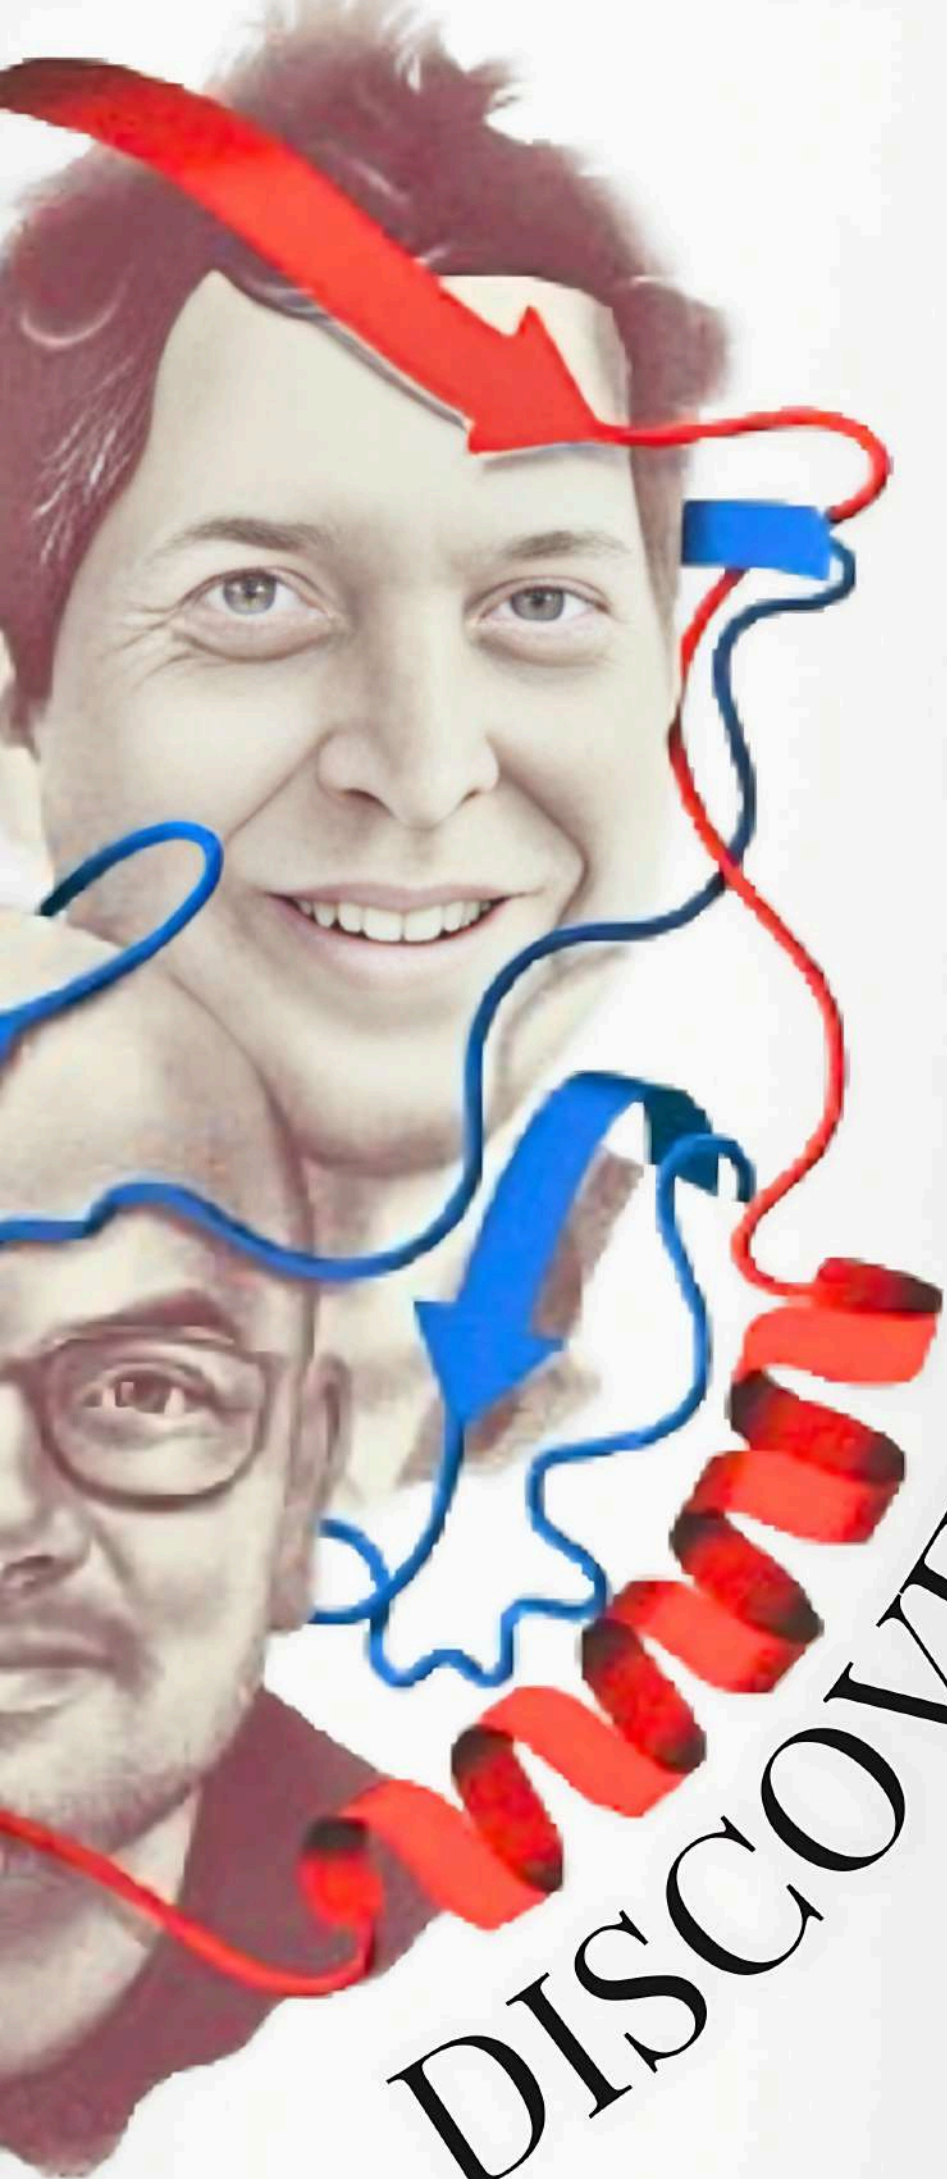

Human civilization today is built on togetherness, inclusivity and liberty, not on individuality and greed. "United we stand, divided we fall." The above-mentioned quote by Winston Churchill acted as a guiding light in one of humanity's darkest battles and should forever be etched in our hearts for progress and development. 🕒

MEDICINE

DISCOVERY

Direwolves

Picture reviving a thousand-year extinct species- a creature as grand and fierce as the dire wolf- an animal that once roamed the lands of North and South America in the Ice Age. This beautiful dream is not just the stuff of science fiction now. Colossal Biosciences, a Texas-based biotechnology startup, has recently made quite a landmark breakthrough in bringing extinct species back to life, and among their flagship projects is the dire wolf. Dire Wolves - the "Aenocyon Dirus" were (are) some of the world's most fearsome predators of the Pleistocene, sharing the earth with mammoths, sabre-toothed cats, and primitive people. These animals were slightly larger but much stronger than today's gray wolves- they had jaws that could crush bones. The last dire wolf lived about 10,000 years ago. Dire wolves disappeared due to drastic climatic changes and dwindling numbers of prey at the end of the Ice Age.

Recently, Colossal Biosciences made a huge announcement regarding the birth of genetically engineered wolf pups, which they named Romulus, Remus, and Khaleesi, very closely resembling the general characteristics of the prehistoric dire wolf regarding physical stature and certain genetic traits. This ambitious project involved advanced genetic editing, using the new CRISPR-Cas9 technology. CRISPR or Clustered Regularly Interspaced Short Palindromic Repeats, is a genetic engineering methodology in which scientists effectively alter the genetic makeup of organisms merely by precise modifications of DNA sequences.

The company obtained a 13,000-year-old extinct dire wolf tooth and also a 72,000-year-old ear bone and extracted ancient DNA from them. These were analyzed and compared with many contemporary gray wolves for genome sequencing, leading Colossal's researchers to find 20 genetic variations for 14 genes that made differences between dire wolves and modern gray wolves. This includes traits that make more muscular bodies, including large-bone structures, and also includes traits that mark adaptation for colder climates. Correction of such genes using the CRISPR technology in the cells of the gray wolves was done very carefully. These genetically altered cells were injected into the growing embryos of wolves, which were implanted in surrogate hound mothers, leading to the birth of these pups that show traits, both in appearance and genetics, associated with dire wolves.

They may not be close copies of the ancient species, but their births are an important advancement in genetic research and species revival.

Enormous ecological issues stem from the forethought of reintroducing genetically resurrected dire wolves into contemporary ecosystems. Apex predators like wolves are involved in crucial processes that maintain the balance in ecosystems. An excellent example of this is the case of gray wolves being reintroduced in 1995 into Yellowstone National Park, where their predation on deer brought about a radical change in the ecosystem by allowing vegetation to grow for other wildlife. Dire wolves occurring in Ice Age ecosystems do not make much sense. These relatively modern ecosystems have been set up over the millennia, injecting a lot of uncertainty about any predatory influence.

Such fears trigger concerns that engineered dire wolves may disrupt existing ecological interrelationships, perhaps by out-competing existing predator species or altering prey dynamics in unpredictable ways.

New York Times

The newly formed dire wolves may not yet be socially structured or hold any hunting learnings as their forebears, and such inadequacy may contribute to survival hurdles for them and therefore their ecological integration. Biotechnological strides have made it possible to even bring back dire wolves as part of the program, touching ecological, political, and ethical fields.

Politically, successes like those of Colossal and similar programs could affect global conservation policy to favor the restoration of extinct species over the protection of endangered ones. Some lawmakers could argue that de-extinction creates less urgency to protect threatened species today, thus indirectly undermining conservation endeavors. Ethically, reviving extinct species begs a large number of questions: Are we to revive species that have undergone natural extinction? What do humans owe to these genetically engineered forms of life? These questions become particularly vital when we talk about the welfare of resurrected animals that might not otherwise survive in modern environments.

Additionally, funds for de-extinction could probably be even better directed to conservation and habitat-protection measures, as conservationists argue that priority must still be placed on addressing the ongoing extinction crisis, rather than resurrecting species that no longer exist. The advances in the dire wolf project by Colossal Biosciences showcase a volley of possibilities for the use of biotechnology for future conservation. It would hypothetically allow for the reintroduction of engineered predators to restore ecological balances to different ecosystems; however, the potential consequences have to be seriously considered. Genetic engineering has raised new ethical issues over the veracity of the species being revived and the role of human influence in natural evolution. Experts are divided; some advocate passionately for the ecological and scientific advantage, and others warn about possible ecological disruption or ethical dilemmas. Strong frameworks guiding genetic editing and de-extinction need to be developed so practices can be ethical and ecology-safe.

The resurrection of the dire wolf as a species will bring incredible scientific promise, alongside some serious consequences that must be considered. As big as this achievement is for 'Colossal Biosciences', the innovative creation of genetically modified wolf pups by utilizing CRISPR technology, we must expand our view towards the larger implications. We must understand what is scientifically possible as well as ecologically safe and ethically sound. Keeping in mind that humanity is at such an extraordinary crossroad—the kind where history and biotechnology have very little dividing line between them, how it finally moves forward from here will determine the fate of the dire wolf and, along with it, the futures of all other species. 🐾

Colossal Bioscience Leadership Team

The resurrection of the dire wolf as a species will bring incredible scientific promise, alongside some serious consequences that must be considered.

AlphaFold & Tumours

A new day dawns. In 2024, the Nobel Prize in Chemistry was awarded to Demis Hassabis, John Jumper, and David Baker for their tremendous breakthrough in molecular chemistry, microbiology, and science in general: using AI as a mechanism to detect the 3D renderings of the most complex protein structures. Gone are the days when protein structures were bombarded with X-rays and their *diffractions* studied; now, AlphaFold enables one to view the structures of the most complex proteins using their *amino acid sequences*, which are encoded with a gene. One may ask, what effect does such a remotely obscure invention have on cancer therapy? Well, the answer is quite simple, so let us break it down here.

What makes a cancer cell differ from a normal one? Well, it is not just "one" mutation or a gene gone wrong; it is, in fact, an entire amalgamation of interactions gone wrong. These chains of mutations will completely alter the way a protein "folds" that is, its inner structure. With AlphaFold, a researcher can understand exactly how the target protein is altered. For example, a healthy cell will have a tumor-suppressing gene, that prevents it from dividing rapidly.

However, the gene is usually absent or altered in most cancerous cells. This can now be analyzed to the deepest extent with the help of this invention. Now, the cancer cell is like a chameleon. After a stipulated duration of chemotherapy, it will mutate to resist treatment. However, AlphaFold can help a scientist to understand how it mutates, and exactly identify the sites where the new drug receptors are present. Cancer is one of the most fatal ailments globally; it is not a mere disease, but an interwoven web of the death of faith and strength. The end of hope and wishes. Nearly 1 in 20 individuals will face the reality of a malignant tumor at least once in their lifetimes.

We are still miles away from a universal "cure" but yes, we have taken a step- one step closer to defeating the emperor of all maladies. ©

PEOPLE AND SOCIETY

Bhagat Singh

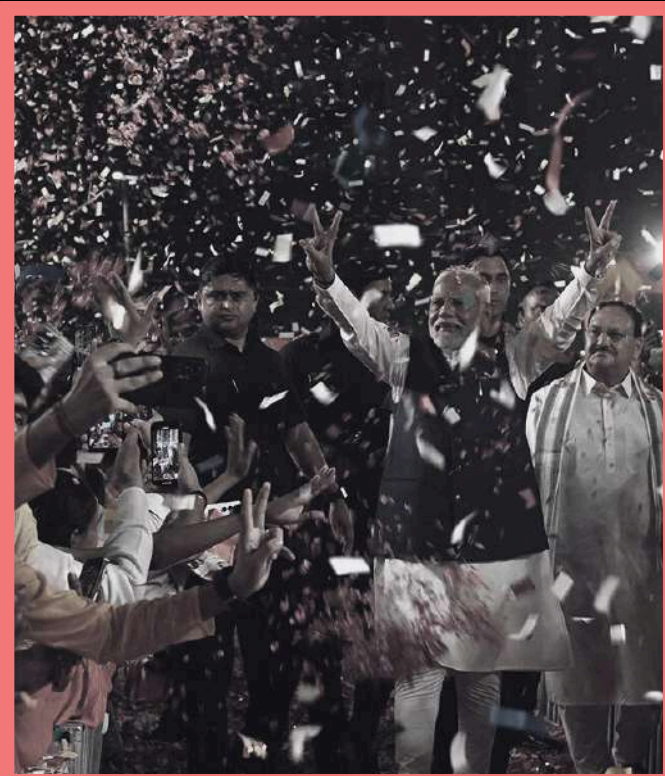

Bhagat Singh was one of the most influential revolutionaries of India's freedom struggle. Born in 1907 in Punjab, he grew up deeply affected by stories of bravery and the oppressive realities of colonial rule.

As a young man, he was drawn to ideas of justice and equality, and he firmly believed that the youth had the power to transform society. His fearless actions, from protesting against unjust laws to standing up in court with unshakable conviction, made him a symbol of resistance. He became widely known after the Lahore Conspiracy Case and his bold defiance of British authority. Bhagat Singh's writings and speeches reflected his vision for an independent India built on fairness and unity.

The Indian “Society”

Indian society is one of the oldest and most diverse in the world, shaped by centuries of history, culture, and traditions. It is home to multiple religions, languages, and communities that coexist and contribute to its unique identity.

At the same time, Indian society faces several challenges as it grows and evolves. Issues such as poverty, inequality, gender discrimination, and caste divisions have been long-standing concerns. However, the nation has also witnessed a strong push toward progress with expanding education, youth participation, and technological advancement.

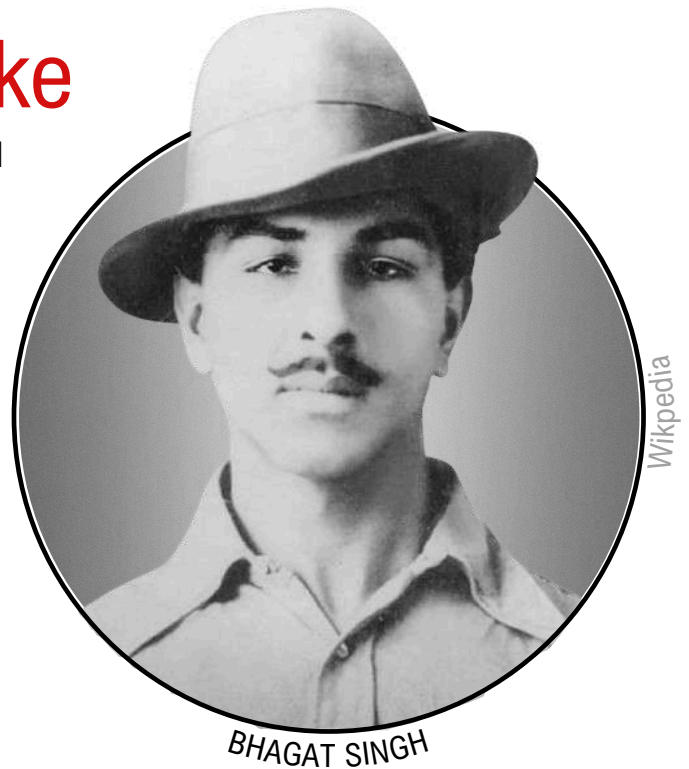

The Indian Youthquake

(On) The Rising Influence of Youth Politicians and Influential Figures in India

With 27.2% of its population being young, India currently has the largest youth demographic in the world. This vast potential and energy drive innovation across various fields, including IT, healthcare, automobiles, mining, and agriculture. Youth in our country have also shown increasing participation in politics. This large demographic is reshaping the current *political landscape*, bringing fresh perspectives, energy, and innovation to governance. However, this is not the first time we have witnessed remarkable youth participation in politics. During the pre-independence era, young *revolutionaries* such as Bhagat Singh, Shivaram Rajguru, Sukhdev Thapar, and Subhas Chandra Bose made valiant contributions to our freedom struggle, highlighting that youth—both then and now—take politics very seriously.

Political parties like the Aam Aadmi Party (AAP) and Bharatiya Janata Party (BJP) are recognizing the value of youth and addressing issues that resonate with them, such as global warming, climate change, and education. Social media has further amplified youth voices, enabling them to mobilize movements, challenge the status quo, and engage in meaningful political discourse. Protests against the Citizenship Amendment Act, which raised concerns over discriminatory provisions, and climate action movements led by young activists highlight their growing role in activism. Despite these advancements, challenges persist. Entry barriers such as financial constraints and resistance from established political elites often limit their influence. Tokenism hampers progress by sidelining young leaders in decision-making. However, the impact of youth in politics is undeniable.

Their engagement has brought modern ideas, increased focus on accountability, and a push for transparency. To harness this potential, systemic support, political education, and mentorship are crucial. With the right support and opportunities, India's young leaders can build a more prosperous and democratic future. [©]

SEEDS OF DESPAIR

Unidentified Source

India is an agrarian country. It's a country dependent mostly on farmers. But then why is it that in our country, farmers are often the most ill-treated? Why is it, that farmers in our country are born in abject poverty and debt and often pass away in the same condition? It's nothing new for us to check the news every day and find another new case of a farmer passing away. Whether it be due to starvation or suicide, one of its biggest reasons remains the debt that these farmers have accumulated over the years. Farmers being in debt in our country and being frustrated enough to rather sacrifice their lives than face such situations is such a normalised occurrence that we hardly bat an eyelid when we learn about such incidents. Often the small farmers are the worst sufferers; being united by common factors that lead them down the path of heavy debts. One of the leading factors for this is the lack of education. Farmers often do not know what's helpful for their fields or what can help increase their yield. This is because they do not have access to knowledge or technical know-how that can inform them about the benefits of using certain management techniques to increase their per hectare yield and economic returns. Another reason is that the usage of advanced technology that can aid farmers in the betterment of their farms are often heavy machinery that they do not have any knowledge about.

Even if they do have knowledge about it, there are possibilities that these heavy machinery need fuel or electricity to function, which most small farmers can't afford. Since most farms are in rural areas, lack of continuous supply of electricity is also a major hindrance in making use of technology. Other times, natural calamities may reap havoc and render the farmer helpless to such unforeseen circumstances. Due to the umpteen amount of bureaucracy and red tapism, the volley of Government schemes made to assist farmers often times do not percolate down the system to benefit them.

The farmers, being naive and simple people are ignorant and unaware about the different schemes the government has rolled out to help them. Also when farmers do not have proper collateral to take loans from banks, they turn to private loans taken from money lenders with high interest

This at times leads them to being pushed into the spiralling, never ending tunnel of despair and hopelessness. All these factors and more lead to farmers feeling under the heavy burden of debt. None of these factors are inherently their fault. However, is it right for the farmers to be harassed continuously for not being able to pay off their debts? Thousands of cases of loan sharks harassing farmers and sometimes even murdering them in the name of collecting money take place in our country. Few are reported while others go unnoticed.

One such gruesome case took place in Sitapur, a city in Uttar Pradesh. This case took place in the year 2018. According to reports from several news agencies, the victim, Gyanchand (aged 45) was apparently pushed off from his tractor during a scuffle between him and the debt recovery agents and was run over with his own tractor by them. It is reported that Gyanchand had loaned a sum of Rs. 90,000/- to buy the very tractor that would soon be the cause of his death.

Collecting debt from loans is no doubt extremely important for the moneylenders to sustain themselves. But is it right to rob somebody's life for banknotes? Is the value of the annadata (literally translating to "food giver" or "farmer") truly equal to that of a few thousand rupees? Does a human life deserve to be traded for any sum of money, no matter how large the amount? Are these the values on which our country has been molded? We leave the answers to these questions upto the reader. This account is an unbiased record of events that have taken place in our country and are still happening. This article is an attempt to create awareness about the sufferings of our food givers, our annadatas (अन्नदाता) - the farmers.

GLOSSARY

1.1 | BLOOD IN PARADISE

- **THE RESISTANCE FRONT (TRF)** - The Resistance Front (TRF) is a militant group active mainly in Jammu and Kashmir, India. It is believed to be a front or proxy group for Lakshar-e-Taiba (LeT), a Pakistan-based terrorist organisation. TRF has been involved in several attacks against Indian security forces and civilians, aiming to oppose the Indian administration in Kashmir.
- **LASHKAR-E-TAIBA / Lashkar-e-Taiba (LeT)** is a Pakistan-based militant Islamist group founded in the late 1980s. Its main goal is to fight against India, especially to liberate Kashmir and merge it with Pakistan. LeT is known for carrying out terrorist attacks in India, including the infamous 2008 Mumbai attacks, which caused massive casualties. The group is designated as a terrorist organisation by many countries and international bodies.
- **NIA** - stands for National Investigation Agency. It is India's primary counter-terrorism law enforcement agency.
- **INDUS WATER TREATY** - The Indus Waters Treaty is an agreement between India and Pakistan signed in 1960, with the help of the World Bank, to share the water of the Indus River and its tributaries.
- **ATTARI WAGAH CROSSING** - The Attari-Wagah Border is a famous border crossing point between India and Pakistan, located near the town of Attari (India) and Wagah (Pakistan) in the state of Punjab.
- **1972 SHIMLA AGREEMENT** - The Shimla Agreement was a treaty signed between India and Pakistan on July 2, 1972, after the Indo-Pak war of 1971, which led to the creation of Bangladesh.
- **PERPETRATORS** - Are people who commit a crime or do something harmful or illegal.
- **MANN KI BAAT** - Mann Ki Baat is a monthly radio program hosted by the Prime Minister of India, Narendra Modi, where he addresses the nation directly. Launched in 2014, the show focuses on sharing ideas, inspiring stories, and discussing social issues and government initiatives to motivate citizens and promote positive change across the country.
- **MAULANA MASOOD AZHAR CASE, IC814** - Maulana Masood Azhar is a militant leader and founder of the terrorist group Jaish-e-Mohammed. In 1999, during the hijacking of Indian Airlines Flight IC 814, terrorists demanded his release along with other prisoners. The Indian government agreed to free him to secure the hostages' release. After his release, Masood Azhar went on to lead Jaish-e-Mohammed, which has been involved in several major terrorist attacks, significantly impacting India's security situation.
- **1999 KARGIL WAR** - The Kargil War was a conflict fought between India and Pakistan from May to July 1999 in the Kargil district of Jammu and Kashmir. Pakistani soldiers and militants infiltrated Indian positions on the Indian side of the Line of Control (LoC), occupying strategic heights. India launched a military operation to evict them, involving intense fighting in high-altitude terrain. The war ended with India regaining control of the occupied areas.
- **MUJAHIDEEN** - It generally refers to Islamic fighters or warriors who take up arms to fight for their religious or political beliefs.
- **THE FINANCIAL ACTION TASK FORCE** - It's an international organisation established in 1989. Its main job is to combat money laundering, terrorist financing, and other related threats to the global financial system.
- **GREY LIST** - A term used by the Financial Action Task Force (FATF), an international body that fights money laundering and terrorism financing. The grey list, officially known as "Jurisdictions Under Increased Monitoring," identifies countries with significant deficiencies in their anti-money laundering (AML) and countering the financing of terrorism (CFT) systems.
- **LEAVE INDIA NOTICE** - A formal legal order issued by the Government of India requiring a foreign national to leave the country within a specified time, typically due to visa violations, security concerns, or illegal activities.
- **AMARNATH YATRA** - A famous annual Hindu pilgrimage to the Amarnath Cave located in the Indian union territory of Jammu and Kashmir. The cave houses a natural ice Shiva Lingam, considered a sacred symbol of Lord Shiva.
- **MILITARY POSTURING** - Showing off or positioning military forces poisedly to send a message – usually to intimidate or warn another country or group; a show of power.
- **UNCTM** - The UN Counter-Terrorism Mechanism (CTM) is a system within the United Nations created to coordinate and strengthen the UN's efforts against terrorism worldwide.

1.2 | WHAT BECAME OF HUMANITY?

- **VASUDHAIVA KUTUMBHAKAM** - A Sanskrit phrase meaning "the world is one family," promoting global unity and peace.
- **FRATERNITY** - A group of people sharing common interests, often implying brotherhood or mutual support.
- **REVERIE** - A state of being pleasantly lost in one's thoughts; a daydream.
- **SCAPEGOAT** - A person or group blamed for something they didn't do, used to take the fall for others' actions.

2.1 | THE INDIAN JUDICIARY

- **ATTRIBUTABLE** - refers to the ability to assign or attribute something to a specific cause or source a very large number of things.
- **MYRIAD** - A very large number of things.
- **DIAMETRICALLY** - as from opposite ends of a diameter.
- **POPULACE** - The common people; masses.

2.2 | LAND, LAW, WAQF FLAWS

- **BILL** - A draft of a proposed law that is presented to a legislative body for debate.
- **WAQF** - Waqf is an Islamic endowment of property permanently dedicating an asset (like land, building, or money) for religious, charitable, or public purposes, with no intention of reclaiming it. Once a waqf is established, the property belongs to Allah and cannot be sold, inherited, or donated.
- **WAQF ALAL AULAD** - Waqf Alal Aulad is a waqf created by a Muslim in favour of his children and their descendants, with the provision that the benefits shall ultimately revert to charity.
- **GUISE** - A way of seeming or looking that is not true or real; a disguise for something else; a false pretence.
- **APPREHENSION** - anxiety or fear that something bad or unpleasant will happen.
- **SCRUTINY** - A searching study, inquiry, or inspection.
- **POLITICAL DISCOURSE** - Political discourse refers to the communication and interpretation of events and ideas within the realm of politics. It involves the establishment of frames of meaning and the application of principles.
- **POLARIZATION** - When a group of people or a society becomes divided into two extreme sides, with very little middle ground of hierarchy, representation, and accountability in the exercise of power.
- **REVIVALISM** - A tendency or desire to revive or restore.
- **SOCIAL COHESION** - Social cohesion is the capacity of a society to ensure the well-being of all its members, minimising disparities and avoiding marginalisation.

2.3 | MECHANICAL JUSTICE

- **IPC** - IPC or The Indian Penal Code is the official criminal code of the Republic of India, inherited from British India after independence. It remained in force until it was repealed and replaced by the Bharatiya Nyaya Sanhita (BNS) in December 2023, which came into effect on July 1, 2024. It was a comprehensive code intended to cover all substantive aspects of criminal law. The Code was drafted on the recommendations of the first Law Commission of India, established in 1834 under the Charter Act 1833 under the chairmanship of Thomas Babington Macaulay.
- **AUSTERE** - severe or strict in manner or attitude.
- **IRREFUTABLE PROSECUTION** - Irrefutable evidence, statements, or arguments cannot be shown to be incorrect or unsatisfactory
- **ABETMENT** - helping, encouraging, or supporting someone to do something wrong or illegal.
- **INSTIGATING** - starting trouble by encouraging someone to do something bad, especially something wrong or harmful.

3.1 | NUCLEAR CROSSROADS

- **CONTENTIOUS** - Causing conflict or disagreement.
- **PRAGMATISM** - A Practical approach, over that of idealism.
- **NON-ALIGNED MOVEMENT (NAM)** - Group of states not aligned with major power blocs.
- **DECRIED** - Publicly condemned or criticised.
- **NON-PROLIFERATION OF NUCLEAR WEAPONS (NPT)** - Treaty to stop the spread of nuclear weapons.
- **COMPREHENSIVE NUCLEAR-TEST-BAN TREATY (CTBT)** - Treaty banning all nuclear explosions.
- **INTERNATIONAL ATOMIC ENERGY AGENCY (IAEA) FRAMEWORK** - UN body ensuring the peaceful use of nuclear energy.

3.2 | TRADE WARS

- **GLOBALIZATION** - When countries around the world become more connected and influenced by each other's political systems, decisions, and international organisations.
- **AMERICA FIRST POLICY** - Key idea in Donald Trump's Presidency, where he emphasised the interest of putting America's Interest above all, including global cooperation.
- **BELT ROAD INITIATIVE** - A huge global development project started by China in 2013 to build infrastructure and improve trade routes connecting Asia, Europe, Africa, and beyond.
- **AMERICAN FIASCO** - A big, embarrassing failure linked to America, where plans or actions went very wrong. (Eg, Vietnam War)
- **THE QUAD** - A strategic group of four countries - India, the United States, Japan, and Australia - that work together to promote security and cooperation in the Indo-Pacific region.
- **TWO-PRONGED ASSAULT** - A strategy that uses two different, distinct methods or ways to achieve a goal or address a problem. It's essentially a multi-faceted approach where two separate, independent actions are taken to work towards the same objective.
- **FORERUNNERS** - The leaders; the frontrunners.
- **DE-DOLLARISATION CAMPAIGN** - A global economic movement where countries reduce reliance on the U.S. dollar in international trade and reserves to regain monetary sovereignty.
- **EMBROILING** - To involve someone or something in conflict, confusion, or a difficult situation, often unintentionally.
- **LIBERTARIAN** - An advocate or supporter of a political philosophy that advocates only minimal state intervention in the free market and the private lives of citizens.
- **TARIFFS** - A tax or fee that a government charges on goods when they are imported.
- **MNCs** - A Multinational Corporation (MNC) is a large company that operates in multiple countries. It has its headquarters in one country but does business, owns factories, or provides services in many others.
- **BANANA REPUBLIC** - A country that is politically unstable, economically dependent on a single export.
- **BIPOLAR WORLD** - A global political situation where two major powers or blocs dominate international relations and influence other countries.

3.3 | THE INDIAN TAX REVAMP

- **PROVIDENT FUND (PF)** - A Provident Fund is a government-backed, compulsory savings scheme for employees to build a retirement corpus. A portion of the employee's salary is deducted monthly, and matched by the employer, both of which earn interest over time. It's meant to ensure financial security after retirement.

3.4 | THE TARIFF TRAP

- **UNCTAD** - Stands for United Nations Conference on Trade and Development.
- **ESPOUSED** - To support, adopt, or embrace an idea, belief, or cause openly.
- **AUSTRIAN WAR OF SUCCESSION** - The Austrian War of Succession (1740–1748) was a major European conflict triggered by the death of Emperor Charles VI and the succession of his daughter, Maria Theresa, to the Habsburg throne. Many European powers challenged her right to rule, leading to battles over territory and influence. Key players included Prussia, France, Britain, Spain, and the Holy Roman Empire. One notable event was Prussia's invasion of Silesia, which started the war. The conflict ended with the Treaty of Aix-la-Chapelle in 1748, confirming Maria Theresa's rule but allowing Prussia to keep Silesia.
- **SEVEN YEARS' WAR - The Seven Years War (1756–1763)** It was a global conflict fought between major powers of the time, mainly Britain and France, along with their allies. Often called the first "world war", it was fought across Europe, North America, Africa, India, and the Caribbean. In North America, it is known as the French and Indian War. The war was mainly about territorial control and colonial dominance. Britain emerged as the biggest winner, gaining large parts of India and Canada, while France lost many of its overseas colonies. The war also left many countries in huge debt, which later fueled revolutions, including the American and French Revolutions.
- **COUP** - A sudden and illegal takeover of a government, usually by a small group like the military or politicians.
- **SUDAN CIVIL WAR** - A power struggle over the country between the Sudanese Armed Forces (SAF) and the Rapid Support Forces (RSF). The SAF is the official army for the country, and the RSF used to be part of the SAF; however, they detached, and each had different purposes. The RSF is known for having soldiers from other African countries as well as a lot of child soldiers. They also committed genocide and a lot of other 'bad' stuff. The SAF is having a hard time with the RSF because they operate off of pick-up trucks or technicals that can have a variety of anti-air or anti-armour capabilities, and the army, which mostly invested in tanks and their air force, can't react fast enough to counter-attack in most cases.
- **HOUTHI REBELLION** - The Houthi Rebellion is an ongoing conflict in Yemen, led by the Houthi movement (also known as Ansar Allah), a Shiite Muslim group from northern Yemen. It began in 2004 as a local rebellion against the Yemeni government, but escalated into a full-blown civil war by 2014, when the Houthis seized the capital, Sana'a and overthrew the internationally recognised government. In 2015, a Saudi Arabia-led coalition intervened militarily to restore the Yemeni government, turning the conflict into a regional power struggle between Sunni Saudi Arabia and Shia-majority Iran, which is accused of supporting the Houthis.
- **SYRIAN CIVIL WAR** - It is an ongoing conflict in Syria that began with the Syrian Revolution in March 2011 when popular discontent with the Ba'athist regime ruled by Bashar al-Assad triggered large-scale protests and pro-democracy rallies across Syria, as part of the wider Arab Spring protests in the region. The Assad regime responded to protests with lethal force, sparking a civil war that culminated in the fall of the Assad regime in December 2024.

4.1 | DIREWOLVES

- **COLOSSAL BIOSCIENCES** - A biotech company working on de-extincting species like the dire wolf.
- **DIREWOLF (AENOCYON DIRUS)** - An extinct Ice Age predator larger and stronger than the modern gray wolf.
- **PLEISTOCENE** - The Pleistocene is a time period in Earth's history, often called the Ice Age in simple terms.
- **GRAY WOLF** - The closest living relative of the dire wolf, used in genetic comparison.
- **SABRE-TOOTHED** - Refers to prehistoric animals with long, curved canine teeth.
- **CRISPR-CAS9** - A precise gene-editing tool used to modify DNA sequences.
- **GENETIC ENGINEERING** - Altering DNA to modify or recreate specific traits in organisms.
- **GENOME** - The complete set of genes or genetic material in an organism.
- **EMBRYOS** - Early-stage organisms used in genetic implantation.
- **SURROGATE HOUND MOTHERS** - Dogs used to carry genetically modified embryos to birth.
- **YELLOWSTONE NATIONAL PARK** - A major U.S. park where gray wolves were reintroduced to restore ecosystem balance.
- **FOREBEARS** - Ancestors or earlier species from which current species descend.
- **RESURRECTED** - Brought back to life, especially extinct species through genetic methods.
- **VERACITY** - The truth or accuracy of something, often used in the context of scientific legitimacy.
- **ECOLOGY** - The study of organisms and how they interact with their environment.

4.2 | ALPHAFOLD AND TUMOURS

- **DIFFRACTION** - Bending and spreading of waves (like light, sound, or water waves) when they pass around an obstacle or through a narrow opening.
- **AMINO ACID SEQUENCES** - The order of amino acids linked together in a protein or peptide.
- **AMALGAMATION** - Combining or merging two or more things into one.
- **TUMOR SUPPRESSING GENE** - A gene that protects cells from turning cancerous by controlling cell growth and division. When it's mutated or inactive, cancer may develop [eg. p53 or BRCA1].
- **MALIGNANT TUMOR** - A cancerous growth made up of abnormal cells that grow uncontrollably and can spread to other parts of the body.

5.1 | YOUTHQUAKE

- **POLITICAL LANDSCAPE** - Refers to the overall state and structure of politics in a country or region, including the main political parties, ideologies, leaders, public opinions, and current political issues or events.
- **REVOLUTIONARIES** - People who actively fight for big changes in a government, system, or society – often by challenging the existing power through protests, ideas, or even armed struggle.
- **STATUS QUO** - Latin phrase that means "the existing state of things." It refers to the current condition or situation, especially in politics or society.
- **AAP (Aam Aadmi Party)** - A political party in India, founded in 2012 to fight corruption and bring clean, honest governance to the people.
- **CITIZENSHIP AMENDMENT ACT** - The Citizenship Act, 1955 is a law passed by the Indian Parliament that lays down how a person can become a citizen of India – by birth, descent, registration, naturalisation, or incorporation of territory.
- **DISCRIMINATORY PROVISION** - is a law, rule, or policy that unfairly treats certain people or groups differently because of their religion, caste, gender, race, language, or other identity factors.
- **TOKENISM** - when an organisation or group includes a small number of people from minority or underrepresented groups just to appear fair or inclusive, without giving them real power or support.

5.2 | SEEDS OF DESPAIR

- **ABJECT** - Extremely bad, degrading, or hopeless.
- **BUREAUCRACY** - A system of government or management marked by complex rules and procedures, often slow, rigid, and filled with paperwork.
- **UMPTEN** - Many; a lot.
- **RED TAPISM** - Excessive adherence to rules and formalities, causing delay and inefficiency.
- **VOLLEY** - (here) In a figurative sense, "volley" means a rapid or overwhelming outpouring of something, like questions, comments, or criticism, directed at someone quickly, one after the other.
- **PERCOLATE** - (here) In its figurative sense, "percolate" means to spread or filter slowly through something, like a group of people or a place. It's often used to describe how information, ideas, or feelings diffuse gradually over time.
- **COLLATERAL** - Property or something valuable that you agree to give to somebody if you cannot pay back money that you have borrowed
